

Autumn 1- How did Industrialisation effect Britain between 1750 - 1900? Knowledge Organiser

Causes of the Industrial Revolution

New transport (A, B, C)

New technology (D, E)

British Empire (F, G)

Key Invention of the Industrial Revolution

The Water Frame - 1769

Richard Arkwright invented a machine, powered by water, to spin cotton into yarn, quickly and easily. His machines did not need skilled operators so Arkwright paid unskilled women and others to work on them. This invention allowed factories and mills to be built.

The Steam Engine - 1717

Thomas Newcomen invents the first steam engine. It would later be improved by James Watt which meant steam engines could replace water and horse power in a wide variety of industries, which in turn allowed factories to be built anywhere.

The Spinning Jenny - 1770

James Hargreaves, a British carpenter and weaver, invents the spinning jenny. The machine spins more than one ball of yarn or thread at a time, making it easier and faster to make cloth. This allows more workers to make cloth more cheaply and increases the amount of factories built.

The Locomotive - 1814

Richard Trevithick was a pioneer in early steam engine technology. He developed a new high-pressure steam engine which could be used to reliably move goods and passengers. This invention made transport much easier and quicker.

Key features of Industrialisation

Agriculture - New tools, fertilizers and harvesting techniques were introduced, resulting in increased productivity and agricultural prosperity.

Industry - factories sprung up all over the country creating more efficient ways to produce goods such as wool, cotton and coal. The increase in factories brought thousands of new jobs.

Transport and communications - Thomas Telford built roads and canals in the 1700s and George Stephenson and Isambard Kingdom Brunel oversaw the 'Railway Mania' of the 1800s. There had previously been no very fast way of transporting goods and people around the country.

Technology - There were also many scientific discoveries and technological inventions that changed society and industry. Changes to sanitation and medical treatment such as the work of John Snow and Edward Jenner improved people's quality of life.

Child Labour

Long working hours: normal shifts were usually 12-14 hours a day, with extra time required during busy periods.

Low wages: a typical wage for male workers was about 15 shillings (75p) a week, but women and children were paid much less, with children three shillings (15p). For this reason, employers preferred to employ women and children.

Cruel discipline: there was frequent "strapping" (hitting with a leather strap). Other punishments included nailing children's ears to the table, and dousing them in water butts to keep them awake.

Accidents: forcing children to crawl into dangerous, unguarded machinery led to many accidents and deaths.

Health: The air was full of dust, which led to chest and lung diseases and loud noise made by machines damaged workers' hearing.

Living Conditions

Overcrowding: due to large numbers of people moving to the cities, there were not enough houses for all these people to live in.

Disease: typhus, typhoid, tuberculosis and cholera all existed in the cities of England.

Overcrowding, low standard housing and poor quality water supplies all helped spread disease.

Waste disposal: gutters were filled with litter. Human waste was discharged directly into the sewers, which flowed straight into rivers.

Poor quality housing: houses were built very close together so there was little light or fresh air inside them. They did not have running water and people found it difficult to keep clean.

Lack of fresh water: people could get water from a variety of places, such as streams, wells and stand pipes, but this water was often polluted by human waste.

Diseases

Cholera

Vomiting
Sickness
Diarrhoea
Headaches
Rapid heart rate
Constantly thirsty
Caused by: Dirty Water

Smallpox

Flu like symptoms
Headaches
Body aches
Mouth ulcers
Blisters
Skin rash
Blindness

Caused by: a contagious disease, easily spread.

Typhoid

Poor appetite
Stomach pain
Headaches
aches and pains
High fever
Intestinal bleeding
Diarrhoea

Caused by: contaminate food or drink
